Python For Beginners
Chapter 6 Lab Exercise

We'll be using loops here to check user inputs.

We want the user to input their gender, however if it doesn't follow
the correct format of being any of the below:

```
m
M
f
F
```

then ask them to try again, and show the input option again.

Once they have completed it successfully, after either 1 or more
iterations, show a message telling them the gender they chose.

Remember:

- Register as a LearnToProgram.tv student at www.learntoprogran.tv/register. This will provide you access to numerous resources as well as discounts on future classes.
- Help is available! Utilize the forums that are available to you as well as the instructor. Lab exercises are checked upon request
